

Hats of for the first Icelandic Reliability and Maintenance professional certified as European Maintenance Expert

Oli Gunnarr Håkansson with the company Fokus - Reliability has passed the certification as "Certified European Expert in Maintenance Management - CEEMM"

Oli's certification has taken place simultaneously with several other educations and examinations to be passed.

Oli Gunnarr Håkansson and his fellow student Niels Palm-Henriksen will receive their well-deserved certificates at a ceremony at the Danish Maintenance Society DDV 31st of October.

The target group for the certification are maintenance managers who want to extend their professional skills with theoretical skills and have their maintenance and reliability competences certified by a recognized organization

The benefits for the CEEMM experts are:

- Increased visibility in the job market
- A more professional approach to the job
- A documentation of the maintenance professionals skills
- Larger mobility in the job market in Europe and globally

For the company the certification also gives benefits such as:

- Development of the employee
- And increased systematic approach to maintenance and production improvements

Prior to the certification Oli has participated in TSMC's training course "Preparation for certification". This course will brush up the candidate's competences and experiences and prepare the candidate for the certification which takes 9 hours.

The certification itself is a challenge and is described by one of the experts: "This is the most difficult education I have ever passed – And also the most useable!"

The certification as "Certified European Expert in Maintenance Management - CEEMM" is developed by the European Maintenance Society EFNMS and is offered to the professionals in the member countries. However the certification is so recognised so it is also used outside Europe. The competences for the certification is in compliance with EN 15268 "Qualification of Maintenance Personnel"

Today 479 maintenance professionals have received the prestigious certificate.

The certification covers the subjects:

- Management and Organisation
- Reliability Performance of Production plants
- Maintenance Information Systems
- Maintenance Methods and Techniques
