

Objective

The course will give the participants the skills which will enable the participants to organise, manage and develop the maintenance organisation making the maintenance organisation a professional partner for the operation.

Target group

The course is aiming at Maintenance Managers, Technical Directors, Maintenance Planners, Production Managers, Maintenance Team Leaders, Coordinators and any other maintenance professional engaged in the maintenance management processes.

Course content

- Maintenance organisation types, characteristics, pros and cons for each maintenance type
- The process for the description of the maintenance organisation and the development of the maintenance function
- Objectives and targets for the maintenance organisation and the selection of objectives and KPIs which will enable the maintenance function to support the business objectives
- Strategies for maintenance
- The organisation of spare part management and resources for the maintenance function
- The maintenance organisations position and communication lines to the operation
- The use of Key Performance Indicators and benchmarking processes as tools for the development and presentation of the maintenance performance, and the link to business management systems

At the course the participants will be invited to use the International standard for maintenance management (EN 15341 "Maintenance - Key Performance Indicators" and the "Global Maintenance and Reliability Indicators") as the vehicle to measure Maintenance and Reliability development.

Course facilitator

The course facilitator for the course are facilitators with practical and theoretical experience in the maintenance organisation.

Course duration

3 days and 1 follow up day 2 months after the training.

Course venue

To be decided - Please visit TSMCs website www.tsmc.dk

Course participants experience

The course participants must be familiar with the management of the Maintenance and Reliability organisation and must have practical experience with the management of the maintenance activities. Each course participant must select a project or a task to be worked on after the course. The follow up activity will increase the value of the skills required at the course.

Certification

The material in the course is a part of the curriculum to achieve certification as European Expert in Maintenance Management.

Course Structure

Course is a combination of lectures and team exercises.
